DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

2. Claim 7 is rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. Claim 7 recites compounds having hydrophobic groups that have no adequate support anywhere in the specification for a meaningful search to be done.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002

Art Unit: 1711

do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

4. Claims 1-2, 5-7, 9-10 are rejected under 35 U.S.C. 102(e) as being anticipated by Kenig-Dodiuk (US Pat. 6,897,266).

Kenig-Dodiuk discloses a dendritically modified polyurethane by reacting diisocyanate with a compound reactive with isocyanate and a hyperbranched polymer having end group reactive to isocyanate (see abstract; col. 2, ln. 38-43). The polymer can be used in coating composition, wherein the substrate can be plastic, moulding, textile, and glass fibers (see col. 7, ln. 35-40, 61-64).

5. Claims 1-2, 6-7 and 9-10 are rejected under 35 U.S.C. 102(b) as being anticipated by Quirk (US Pat. 5,798,418).

Quirk discloses a multi-arm polymer, having hydroxyl functional groups reacting with diisocyanates and diols to produce polyurethane blocks as the outer segments of the polymer (see abstract; claims 42 and 58). The polymer can be used as coatings, films, and fibers (see col. 1, ln. 50-51).

Claim Rejections - 35 USC § 103

6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person

Art Unit: 1711

having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

7. Claims 3-4 or 3-5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kenig-Doduik or Quirk respectively.

Kenig-Doduik and Quirk are as set forth above and incorporated herein.

Although the references do not teach the textile to be linear, sheet-like or synthetic, it would have been obvious to one of ordinary skill in the art that the polymer would have been applied to these substrates as well and would have given the same effects.
